580 area code at a glance

The 580 area code is assigned to Oklahoma and covers a broad area outside the central Oklahoma City calling area.

The area code was created in 1997 from part of Oklahoma's former 405 territory.

A number's area code indicates a numbering region—not the caller's current location, identity, or legitimacy.

Commonly associated communities include Lawton, Enid, Ardmore, Duncan, Altus, Ponca City, Woodward, Ada, Durant, and many smaller communities.

A 580 number may belong to a mobile phone, landline, business system, or internet-based phone service.

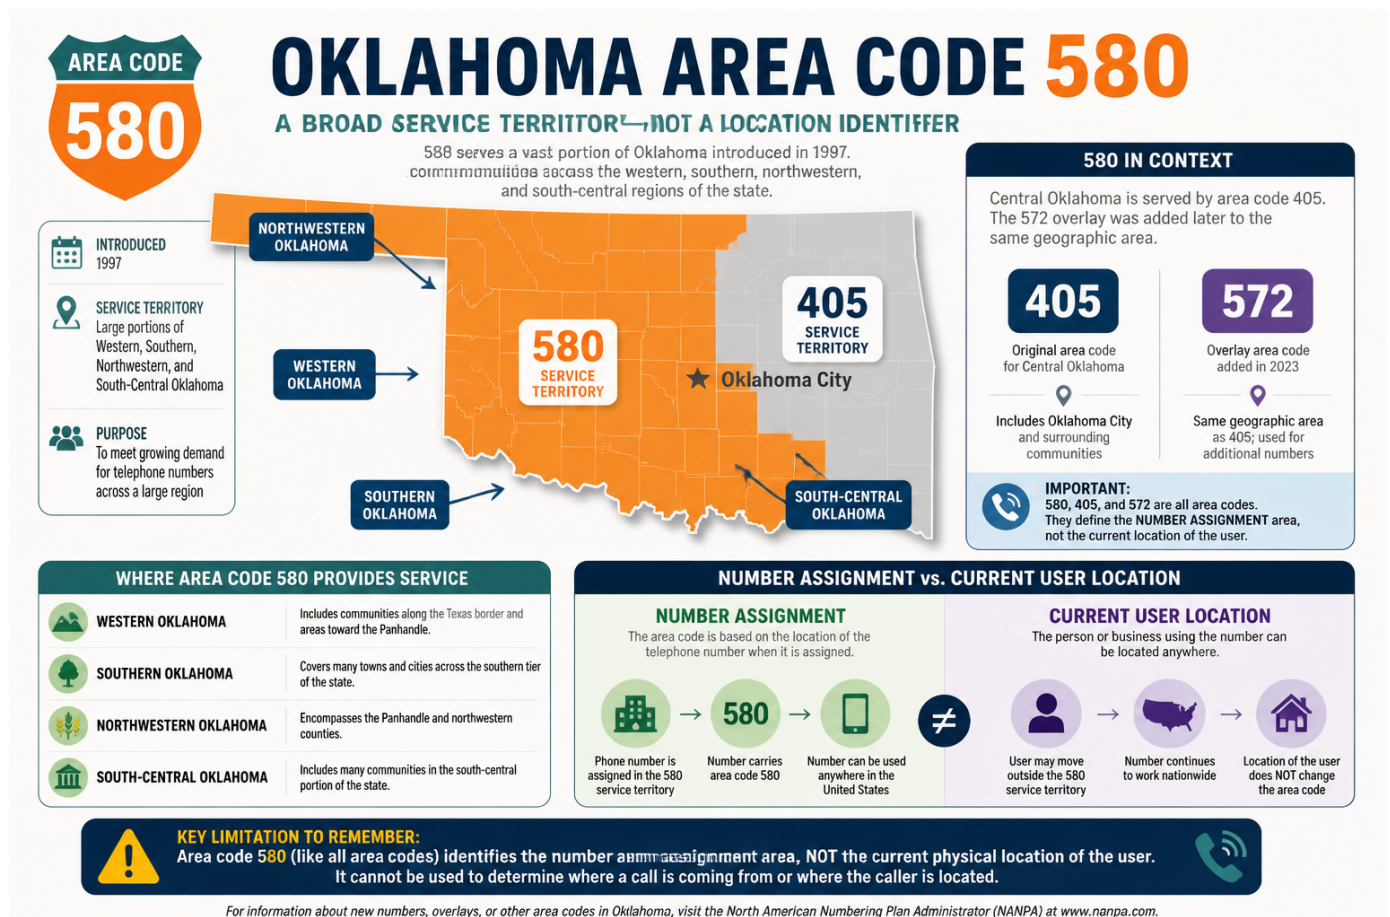

DIAGRAM The 580 area code covers broad Oklahoma regions, but number assignment does not confirm a caller's present location.

Fast facts for everyday use

Question

Answer

What state uses 580?

Oklahoma

Question	Answer
What time zone applies?	Central Time: UTC–6 during standard time and UTC–5 during daylight saving time
What areas are associated with it?	Western, southern, northwestern, and south-central Oklahoma communities
Does it identify an exact address?	No. Telephone boundaries follow exchanges and rate centers, not exact city or county borders.
Can the caller be outside Oklahoma?	Yes. Number portability, forwarding, virtual services, and caller-ID spoofing can make the displayed area code misleading.

How to call a 580 number

1 Calling from the United States or Canada

Dial the complete ten-digit number: 580 followed by the seven-digit local number.

2 Calling from another country

Use your international exit code, followed by country code +1 and the full ten-digit 580 number.

3 Saving the contact

Save the number in international format as +1-580-XXX-XXXX for compatibility while traveling or using internet-based calling services.

4 Check the cost first

The area code does not determine the price. Charges depend on your carrier, plan, destination, roaming status, and calling application.

Before responding to an unexpected 580 call or text

Pause before sharing information

Do not provide passwords, account credentials, payment details, or one-time verification codes.

Write down the displayed number and the caller's claimed identity

Keep the details available while you verify the contact.

Verify independently

Use a phone number from the organization's official website, statement, or physical card—not a link or number supplied in an unexpected message.

Treat payment demands as unverified

A familiar-looking Oklahoma prefix does not prove that a request is genuine.

Block or report unwanted contact

Take this step when the call or message is clearly unwanted or fraudulent.

! The local-looking number test

A 580 number may have been assigned in Oklahoma, retained after the owner moved, routed through a cloud phone system, or copied through caller-ID spoofing. Never use the area code alone to confirm a person's location, identity, or trustworthiness.

Calling rates and roaming charges vary by carrier, plan, destination, and service. Verify unexpected requests through an independent channel.
