

PRINTABLE DIALING GUIDE

Dial a 580 Number Correctly—Every Time

Use this quick guide to enter a 580 area code number in the right format, whether you are calling from the United States, Canada, or another country. Keep the recipient's complete 10-digit number together before placing the call.

Au sommaire

- 1 The essential format
- 2 How to dial from the United States or Canada
- 3 How to dial from another country
- 4 Before you press Call

The essential format

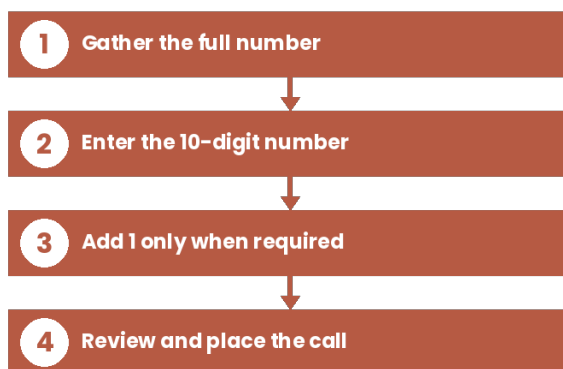

A complete 580 number contains the 580 area code plus seven local digits.

Domestic format: 580-XXX-XXXX.

International format: +1-580-XXX-XXXX, or your country's exit code followed by 1, 580, and the seven local digits.

Area code 580 is assigned to Oklahoma and is a geographic code, not a toll-free code.

How to dial from the United States or Canada

1 Gather the full number

Confirm that you have 580 plus all seven local digits. Do not dial only the area code.

2 Enter the 10-digit number

On a mobile phone, enter 580-XXX-XXXX and press call. This is the clearest standard format for calls within the United States or Canada.

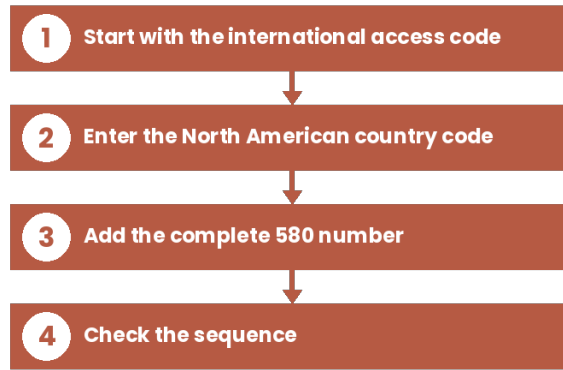

3 Add 1 only when required

A landline, hotel phone, business phone system, or carrier may require the domestic long-distance format 1-580-XXX-XXXX.

4 Review and place the call

Check that the area code is 580 and that the local number contains seven digits, then place the call.

How to dial from another country

1 **Start with the international access code**

Use the exit code required by the country where the call begins, or use the plus sign on a compatible mobile phone.

2 **Enter the North American country code**

Enter 1 after the exit code, or use +1 in the mobile-friendly format.

3 **Add the complete 580 number**

Finish with 580 and the seven-digit local number. The full mobile format is +1-580-XXX-XXXX.

4 **Check the sequence**

The order is exit code, country code 1, 580 area code, seven local digits, then place the call.

Before you press Call

I entered the complete 10-digit number

580 plus seven local digits

I used the correct format for my device

Usually 580-XXX-XXXX on mobile; a landline may require 1 first

I added +1 when calling internationally

Use an exit code before 1 if the plus sign is unavailable

I did not add an extra zero or domestic trunk prefix before +1

International format begins with the appropriate exit code or +1

I kept the recipient's assigned number intact

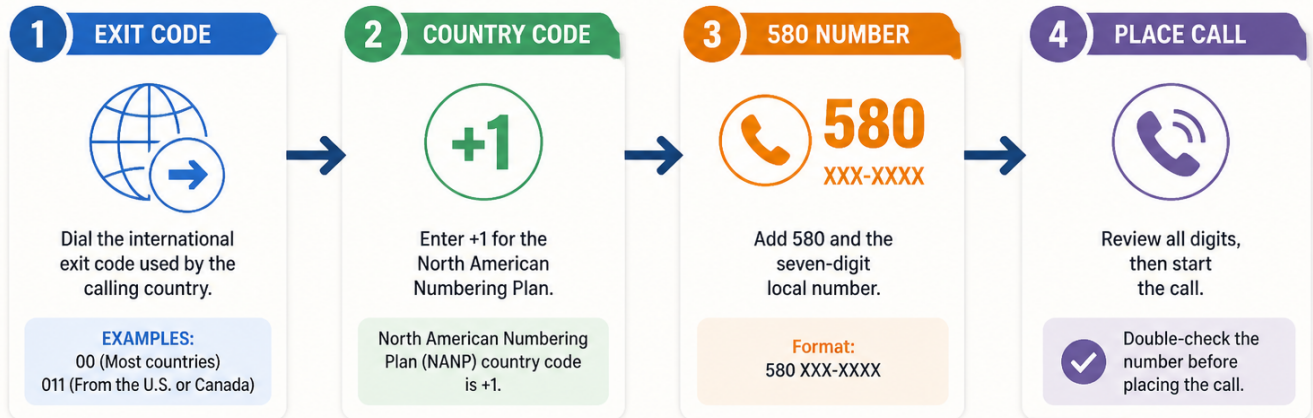

Do not replace 580 based on the recipient's apparent location

HOW TO DIAL A 580 AREA CODE NUMBER INTERNATIONALLY

Follow these simple steps to call a 580 area code number from outside the United States.

EXAMPLE

Calling 580-555-1234 from a country with exit code 00

Dial this number

TIPS

Exit codes vary by country. Check with your local provider if unsure.

Some mobile carriers may require a different exit code.

International rates may apply. Check with your provider.

! A 580 caller ID is not proof of identity

The 580 area code indicates a numbering area in Oklahoma, but caller ID does not prove where a caller is located or who is calling. Verify unexpected callers independently.

Calling costs and dialing requirements can vary by carrier, phone system, hotel, or business line. Check the applicable calling plan or phone-system instructions when a leading 1 or an international access code is required.
